A GET request need to be sent to code54.

```
<form action="https://codefifty4.com/api/purchase" method="GET">

  <input  name="redirect_url" value="<Merchant Redirect Url>  type="hidden">
  <input  name="hash" value="{{$hash}}"  type="hidden">
  <input  name="name" value="Kola Samuel"  type="hidden">
  <input name="ref" value="3234234343xxx"  type="hidden">
  <input name="email" value="user@gmail.com"  type="hidden">
  <input  name="amount" value="12"  type="hidden">
  <input name="currency" value="USD"  type="hidden">

  <button type="submit" >Pay</button>

</form>
```

FIELDS

The **hash** field is the merchant API Key hashed with SHA 256 algorithm. It is
required. Example of a php implementation is

$hash = hash('sha256', 'API_KEY')

The **redirect url** is the merchant url the user will get redirected to after a successful
purchase of the voucher. Eg. http://127.0.0.1:8001/redirect

The **name** field is the customer name

The **ref** field is a any unique string that can referenced to the payment

The **email** field is the customer email

The **amount**

The **currency**. It can be either USD, EUR, GBP
